

WALTER10K AND THE CASE CONSOLE: A CLEARER WAY TO READ WHAT COMPANIES FILE

LOS ANGELES, CA — Walter10K is a financial-education platform built to help people understand public companies by organizing annual filings into clear, readable Case Summaries at walter10k.com.

The Walter10K Case Console turns dense public-company filings into understandable investigations supported by a documented, three-stage verification standard.

When Walter10K has read the filing, the Case Summary begins with a Filing Read: BULL, MIXED or BEAR. It then organizes the filing into What's Working, What's Weak and What Could Bite You. The format helps readers navigate the public record; it does not rate a stock, predict a price or provide investment advice.

A central feature of the platform is The Three Gates, its documented publication standard. The process separates source verification, independent review and publication checks with publisher oversight so that each stage asks a different question before a report can be released.

“Corporate filings contain the facts people need, but those facts are often buried under language and structure that make the documents difficult to use,” said LaraLu Riedel, founder and publisher of Walter10K. “Walter10K was created to make the public record easier to understand while preserving the discipline of checking the source, challenging the work and applying publication controls before release.”

ABOUT WALTER10K

Walter10K is a financial-education and public-record investigation platform built to make annual filings easier to understand. The Walter10K Case Console organizes filing information into plain-English Case Summaries. Its Three Gates publication standard combines source verification, independent review and publication checks with publisher oversight. Walter10K provides information from the public record and does not offer stock ratings, price predictions or financial advice.
